

Permanon PS Paste Application Instructions

Full Strength for Problem Areas

1. **APPLY:** Using a damp sponge or cloth, apply PS Paste over the dirty surface in a circular motion. For sensitive surfaces, first try PS Paste in a less prominent area. For large areas apply PS Paste with a rotary type buffer or soft brush.
2. **RINSE:** Rinse the area thoroughly with water and a clean sponge.

Diluted to Wash Surfaces

1. **APPLY:** Mix one level teaspoon of PS Paste with two gallons of water. The water will show little suds. This is normal and desirable. Do not use too much concentrate. This wastes product and makes rinsing more difficult. Wash surfaces as you normally would.
2. **RINSE:** Rinse the surface thoroughly with water.

Notes:

DO NOT use on polycarbonate (Plexiglas is an acrylic thermoplastic; Lexan is a polycarbonate). If not absolutely sure, avoid using PS Paste on the clear surfaces.

Do not allow to freeze.
